

IN-BUILDING WIRELESS: YOU HAVE OPTIONS

With 80% of mobile traffic starting and ending in a building, wireless infrastructure is a crucial service just like HVAC, electrical and plumbing.

For employers, reliable in-building cellular connectivity is a way to both improve productivity and to attract and keep talented employees. For property owners, providing reliable in-building connectivity helps retain and attract tenants, and increase the value of their properties. Adding a wireless network will make sure you're ready for 5G – the next generation in wireless – and the revolution of the Internet of Things (IoT).

T-Mobile works with enterprises, building owners, tenants, operators and commercial developers across the country to connect them with the highest quality wireless service.

T-Mobile helps you carefully engineer a solution that takes into account the size, shape, building materials, demand, and other relevant aspects of your building – and develop a financing and ownership model that meets your needs.

WHAT DO BUILDING MANAGERS, OPERATORS & ARCHITECTS THINK?

87% AGREED

It's imperative that we have in-building cellular coverage in all areas of our buildings.

84% AGREED

Fitting our buildings with optimal in-building cellular coverage would improve our employee productivity.
